"Introduction To MediApp!

#1. What is MediApp ?

INTRODUCTION: WHAT MEDIAPP REALLY IS MediApp is not just an app. It's not "a medical delivery service" or "a doctor booking system." MediApp is the creation of a new healthcare structure. One that India, especially the North-East, has never seen.

a) What We Provide

- Doctor's live location & availability
- Medicine and drug house live location & availability
- Medicine & supplement deliveries
- Diet & Health Plan (Membership-based)
- Hospital locations, doctor schedules & consultation fees
- Appointment booking & time estimation
- Online video call + chat consultations
- A MediApp-owned hospital + medical franchise network
- Donations & charity fundraisers

(Reminder: This app works without membership except the Diet Plan. No AI membership, no subscription-based app features.)

b) How MediApp started:

MediApp started because people in Arunachal struggle with basic problems:

- Not knowing which doctor is in which hospital
- Not knowing which medicines are available where
- Wasting hours in lines
- Travelling long distances for simple checkups
- Lack of transparency, trust, and access
- Lack of good, efficient doctors and modern medical equipment—

because our state still doesn't have advanced machines and specialists that other states take for granted. My hospital will solve this by building from top to bottom, bringing in the equipment Arunachal doesn't have, and filling the gaps that have been ignored for years.

MediApp was created from lived experience—to fix the smallest and the biggest gaps in our healthcare system.

#2. Why MediApp

- Faster than offline consultations
- Cheaper than current systems
- Transparent
- Trust-based
- Designed for Arunachal's real population
- Local solution for local problems
- Home-to-home doctors
- Delivery of medicines and supplements
- Donation platform for emergencies services.

#3. WHAT MAKES MEDIAPP DIFFERENT

Against Practo:

- Home-to-home doctors
- Cheaper consultations
- Better connection with local doctors
- Local availability info (Practo doesn't do that)

Against Apollo:

- Apollo is not present in Northeast
- No direct competition in Arunachal
- We combine tech + hospital + delivery
- We solve travel issues, poor infrastructure, village-to-city movement

In the North-East:

- We have zero competition
- First to enter with this model
- First-mover advantage

#4. How MediApp Works & How It Makes Money*

(Detailed - For Us, Our Team, Our Coders, Our Partners)

1) Doctor's Live Location & Availability

How it works

We show *which doctor is in which hospital or clinic* in real-time.
We display their *specialty*, *years of experience*, and *current status*
(Available / Busy / In Surgery / On Break).
A doctor is *only visible* when they are physically inside the hospital or clinic - if they are at home or outside, their location is *not* shown (for privacy and safety).
Patients can see *how many doctors are available right now* in a particular hospital and what departments they belong to.

What we solve

In Arunachal, most people don't know:
* Which doctor is in which hospital
* Whether that doctor is actually available today
* Whether the doctor has the right specialization

Because of this, people:
* Go hospital-to-hospital blindly
* Waste hours, fuel, and energy
* Lose trust in the system
* Delay treatment for themselves and their family

With this feature, **we almost solve 90% of that problem.**
We:
* Help people know exactly where to go
* Build **trust** between patients and doctors
* Reduce unnecessary travel and confusion
* Let patients choose doctors they genuinely prefer based on experience and specialty

What we solve

In Arunachal, most people don't know:

* Which doctor is in which hospital
* Whether that doctor is actually available today
* Whether the doctor has the right specialization

Because of this, people:

* Go hospital-to-hospital blindly
* Waste hours, fuel, and energy
* Lose trust in the system
* Delay treatment for themselves and their family

With this feature, **we almost solve 90% of that problem.**

We:

* Help people know exactly where to go
* Build **trust** between patients and doctors
* Reduce unnecessary travel and confusion
* Let patients choose doctors they genuinely prefer based on experience and specialty

How we make money

In the beginning:

* No earnings from this module, we use it purely to help people and build trust.

Later, once we grow:

* Doctors can pay us to **highlight** their profile or get priority visibility.
* Hospitals and medical service providers can pay us for **sponsored placements** (ads inside the app).

Legal

* No strict legal clauses here.
* We just need **basic MoUs**/agreements with hospitals and clinics to show their doctors and timings in our app.

2) Medicine & Drug House Live Availability**

How it works

* We show **which medicine is available in which pharmacy/drug house**.
* We display **cheaper and safe alternatives** for medicines that are too expensive, so patients have options.
* If one pharmacy doesn't have a medicine, the app will show other nearby pharmacies that have it.

What we solve

Right now, people:

* Go shop to shop searching for one medicine
* Waste a lot of time and energy
* Sometimes come back home without getting it
* End up buying **very expensive versions** because they don't know there are alternative brands

We solve:

* The problem of **finding the right shop**
* The problem of **not knowing alternatives**
* The problem of **wasted time and travel**
* The stress of running around in emergencies

With this, we become the **Google Maps of medicines** in Arunachal.

Legal

* No heavy legal clauses here because:
* We are only **displaying information** supplied by verified pharmacies.

3) Medicine & Supplement Deliveries**

How it works

We run this in **two ways**:

A) Our Own Stock:

* We buy commonly used medicines and supplements in **bulk** from manufacturers, wholesalers or distributors.
* We keep small but important stocks like:
  * Painkillers
  * Basic antibiotics (allowed as per law under pharmacist)
  * Zinc, Potassium, Calcium
  * Multivitamins
  * Creatine
  * Protein powders, etc.
* We sell these at **market price or slightly below** to stay competitive.

B) Partner Retailers:

* For medicines or supplements we don't have in our stock,
  * We place an order with our partnered nearby retailers.
  * Our delivery partner picks it up from the shop and then delivers it to the patient's home.

What we solve

We solve:

* People having to step out when they are already sick or weak.
* Problems with **traffic, distance and bad weather**.
* Problems for **elderly people** and people in **rural or hilly areas**.
* Wasted time standing in long lines at drug houses.

We **save time, save effort and make life easier** for people who are already going through health issues.

How we make money

* **Delivery fees** for each order.
* **Profit margins** from buying in wholesale and selling near/at market price.
* In the long run, **large partnership deals** with pharma and supplement brands, where we promote their products on our platform for extra profit.

Legal requirements (very important for us)

To run this properly and legally, we will need:

* **Drug License (Retail / Wholesale)** – Form 20/21 under the Drugs & Cosmetics Act.
* **GST Registration** – because we are selling goods and offering services.
* **FSSAI License** – for food-grade supplements like protein powders, creatine, etc.
* **Trade License** – from local municipal or district authorities.
* **A certified Pharmacist-in-Charge** – with proper qualification and registration.

Government & Local Papers:

* License from **Arunachal Drug Control Department**
* Local **district trade registration**

4) Diet & Healthcare Plan (Membership)**

How it works

This is our **only membership-based service**, and also one of our **most profitable**.

We will:

* Give people **custom diet plans** based on their height, weight, lifestyle and health goals.
* Help them build **healthy life habits** and medical habits.
* Provide them with **personal gym trainers** and **diet guidance**.
* Give free or discounted **gym memberships** through partnerships with local gyms.

So for the members, everything is in one place:

Diet + Trainer + Gym + Health guidance.

What we solve

We solve:

* Confusion about dieting, food, “what should I eat?”
* People randomly following Instagram diets that don’t work.
* High gym costs without proper guidance.
* Unemployment or underpayment of gym trainers.

We help:

* Normal people become **healthier and more disciplined**.
* Trainers earn **more money and respect**.
* Gyms get **more customers** from our app.

How we make money

* We charge **₹20,000 – ₹30,000 per membership** (depending on city, access, and plan).
* We pay gym trainers around **₹6,000 – ₹10,000** and gyms around **₹4,000 – ₹7,000** per member (approx).
* The remaining amount after these costs is **our profit**.
* We can charge extra for:
  * High-skill trainers
  * One-on-one premium coaching
  * Special transformation plans

We also open doors to:

* Partnerships with **gyms**, **gym equipment sellers**, **fitness brands**, **gym gear companies**.
* This single business arm can earn us **millions** just by scaling through cities and towns.

5) Hospital Locations, Doctor Availability & Consultation Fees**

How it works

* We show **which hospital is available for which disease or department** (e.g., surgery, maternity, orthopaedic, cardiac, etc.).
* We show **which hospital is open right now**.
* We display **consultation fees for each hospital**, but this fee will be:
  * Negotiated and adjusted by us
  * Slightly cheaper for people using MediApp

Example of how we adjust:

> Hospital's original consultation fee: **₹500**
> We negotiate: **₹50 less** because we're giving them free publicity and more patients
> New fee: **₹450** for our users

Now from this ₹450:

* The hospital takes **₹400**
* We keep **₹50** as our service fee
Or it can be:
* Hospital fee: **₹500**
* Discount: **₹30**
* User pays: **₹470**
* Hospital gets: **₹440**
* We keep: **₹30**
We can change these numbers based on deals.
We also show:
* How many doctors are available in the hospital
* Their expertise and years of experience

What we solve
We solve:
* People going to the **wrong hospital** for their disease.
* People being **overcharged** or **surprised by fees**.
* People not knowing **which hospital has better or cheaper options**.
We make hospital visits **transparent, cheaper and smarter**.

##How we make money
* We earn from **every consultation done through our platform**, using this price difference / commission model.
* Later, we can earn from **advertisements, promotions and featured hospital listings** inside the app.

Legal
* Mostly just **agreements/MoUs** with hospitals to:
* Fix the price
* Set the commission
* Allow us to show their data
* No heavy government licensing needed for just listing and booking.

6) Appointment Booking & Timing Estimation**

How it works

We let people **book a doctor's appointment** from their phone, and we also estimate the **waiting time**.
We use a **simple equation**:
> **Estimated waiting time = (Number of patients before you) × (Average time per patient)**
We assume **6–7 minutes per patient** for calculation.
Example:
* Number of appointments before you: **20**
* Average time per patient: **7 minutes**
So:
> **20 × 7 = 140 minutes**
> 140 minutes = **2.33 hours**
If the current time is **2:30 PM**,
> **2:30 PM + 2 hours 20 minutes ≈ 4:50–5:00 PM**
So the app will show them something like:
> "Your estimated checkup time: **around 5:00 PM**"
This helps them **stay at home** or **plan better** instead of sitting on a bench for hours.

##What we solve

We solve:
* Long waiting lines
* Overcrowded hospitals
* Patients sitting for hours without knowing their turn
* Frustration and anger towards hospital staff

We turn a **chaotic system into a predictable one**.

How we make money

* We take a **small service fee** or **commission** from each appointment booked through the app.

Legal

* No legal clause here.
* Appointment booking is a **service**, not a regulated act.

7) Online Video Call & Chat Consultation**

How it works

* The patient chooses a doctor and consultation type (video or chat).
* Before the consultation starts, our app asks:
> "Please complete your payment to begin your consultation. Pay here."
* After payment, the system automatically sends from the patient's side:
> "My payment has been done ✓. Please check in to approve the transaction."
* Once the doctor accepts, the system sends:
> "Your doctor has approved the transaction. Please wait a moment while we connect you... Estimated wait: **N** minutes."
* When the doctor comes online:
> "You are now connected with your doctor. Begin your chat."
* Then the doctor says "Hi" to start the conversation.
* Phone numbers, WhatsApp, Gmail, or any form of **contact sharing is blocked** using smart filters and number-blocking logic (10-digit blocks).
* Chats are **encrypted**.
* Calls are not end-to-end encrypted, so we can **monitor for abuse or rule-violations** if needed.

How we make money

We keep the pricing **cheaper than offline**:

* New/less experienced doctors: **₹200** (+ ₹50 service fee = ₹250)
* Mid-range experienced doctors: **₹300** (+ ₹50 = ₹350)
* Highly experienced/rare speciality: **₹400** (+ ₹50 = ₹450)

We:

* Pay the doctors their part
* Keep **₹50 per consultation** as our fee

If we scale this with **thousands of consultations per day**, this alone can bring us **huge revenue**.

Legal

* We must follow India's **Telemedicine Guidelines 2020**.
* We must onboard only **licensed and registered doctors** (MCI / State Medical Council).
* We must have **doctor agreements** that clearly:
  * Prevent them from sharing personal contact
  * Explain liability & ethics

8) Our Hospital & Franchise of Medicals**

How it works

We will **not** waste money building giant hospitals from scratch.
Instead, we:
* Build or upgrade hospitals by **adding the machines and facilities that Arunachal doesn't already have**.
* In capital areas, we add **higher-end machines** that people currently travel to Delhi/ Mumbai/Guwahati for.
* In rural areas, we add **basic but essential machines** and create small but efficient centers.
* We partner with **existing hospitals, clinics, buildings or landowners** and turn them into our franchise model.
* We bring in **good specialist doctors** to run these centers.
This way, we **solve the gaps** in the medical infrastructure without overspending on unnecessary things.

What we solve

We solve:
* People dying or suffering during long-distance travel to other states.
* Huge expenses on travel, hotels, outside treatment etc.
* Lack of good machines and specialists in Arunachal.
* Lack of nearby good facilities in rural and semi-rural regions.
We:
* Save money
* Save time
* Save lives
This is not just a business model, it's a **revolutionary step** for the state and later for other regions.

How we make money

* Earnings from **machine usage and hospital OPD**
* Stable income from **franchises paying us fees**
* Long-term wealth from **real estate and land value**
* Expansion from **Arunachal → Nagaland → Mizoram → rest of India → outside India**

This creates **real, physical, long-term wealth**, not just app money.

Legal

We will need:

Clinical Establishment License for each hospital/center

* **Fire NOC** and **building safety certificates**
* **Bio-medical waste management license**
* **NABL** or similar accreditation if we have labs
* **Trade License**
* **Doctor & Staff contracts**
* Proper agreements with landowners, partners, franchises

9) Donations & Charity Collections**

How it works

* We make **videos and posts** about people who need urgent donations (only if they give permission).
* These can be kids needing surgery, elders with heart problems, accident cases, etc.
* We put these stories in a special **Donations/News section** inside the app where users can see and donate.
* People from Arunachal, rest of India and even NRIs can **donate directly** through our platform.
* The money goes straight towards that patient's **hospital, surgery or treatment costs**.
* Once the **required amount is fully collected**, and the patient's need is fulfilled,
  * Then **we** may keep a small amount from extra donations or build a **separate MediApp Health Fund** for future patients.

What we solve

We solve:

* People dying because they couldn't arrange money on time.
* Poor and middle-class families going into **debt** for surgeries.
* Lack of a proper, verified system to raise funds.
* Lack of **trustworthy donation platforms** dedicated specifically to Arunachal and Northeast.

We:

* Help people **get cured**
* Reduce **financial burden**
* Build a **culture of helping each other**

This is a big thing **not only in Arunachal, not only in India, but worldwide.**

How we make money (indirectly)

We:

* Do **not** take money before the patient's treatment need is fulfilled.
* This is **strictly to help people**, not to loot them.

But once our platform gets big:

* We gain **huge respect** from the public.
* Government, news channels and social media will **talk about us for free**.
* Our donation system itself becomes a **free marketing machine**.
* This cuts our advertisement costs heavily—we might not even need paid ads.

People will say:

> "MediApp is that company that helps poor people with surgeries and health."

That line alone is worth more than millions in marketing.

10) Lab Tests & Sample Collection (Partner-Based Model)

How it works (Our Process)

We are not building our own lab in Year 1.

We follow a partner-based diagnostic model, which gives us:

Zero machine cost

Zero technician cost

Zero maintenance

Zero electricity/space cost

Here is our exact workflow:

User books a lab test on MediApp

We notify our partner lab

Their technician goes for home sample collection OR the user visits the lab

Lab processes the report

MediApp receives the digital report → uploads it into the app

User can instantly forward the report to a doctor inside MediApp

Everything is automatic.

No manual work from our side.

Money Making (Our Revenue Model)

We earn money in three ways:

1. Commission per test (Primary Revenue)

All partner labs give us a fixed commission for every test booked through MediApp.

Example:

CBC test price: ₹500

Lab commission to us: ₹50 – ₹100

Average margins:

10% – 25% per test

2. Home Sample Collection Fee (Our Additional Earnings)

If the user books home sample collection, we take:

₹30 – ₹50 for nearby areas

₹80 – ₹120 for far areas

The technician earns separately — we only take a service charge.

3. Doctor Follow-Up Recommendation

After the report comes:
App suggests "Talk to a doctor for interpretation"
User pays consultation fee
We earn ₹50 per call
This increases our revenue per user, making lab tests one of the strongest income streams.
Legal Requirements
NONE for MediApp
All legal responsibility remains with:
The partner lab
Their technicians
Their machines
Their licenses
We only act as a digital booking + delivery platform, exactly like Practo, 1MG, and Apollo 24/7.
We just need simple MoUs with partner labs.
What We Solve (The Real Problem)
Arunachal has one of the weakest diagnostic infrastructures.
People suffer because:
Labs are far away
No home sample collection
No price transparency
No comparison between labs
No tracking of report status
No link between hospital → lab → doctor
No emergency reporting system
MediApp solves ALL of this.

With MediApp:

- Tests are booked from home
- Reports come directly to the app
- People don't need to run lab-to-lab
- Home collection supports elderly & remote families
- Transparent pricing avoids scams
- Faster diagnosis → faster treatment → more lives saved

Final Summary For Presentation

Lab Tests = Zero Investment + High Income + High Impact

This module is one of the strongest business pillars of MediApp because:

No capital needed

High daily transactions

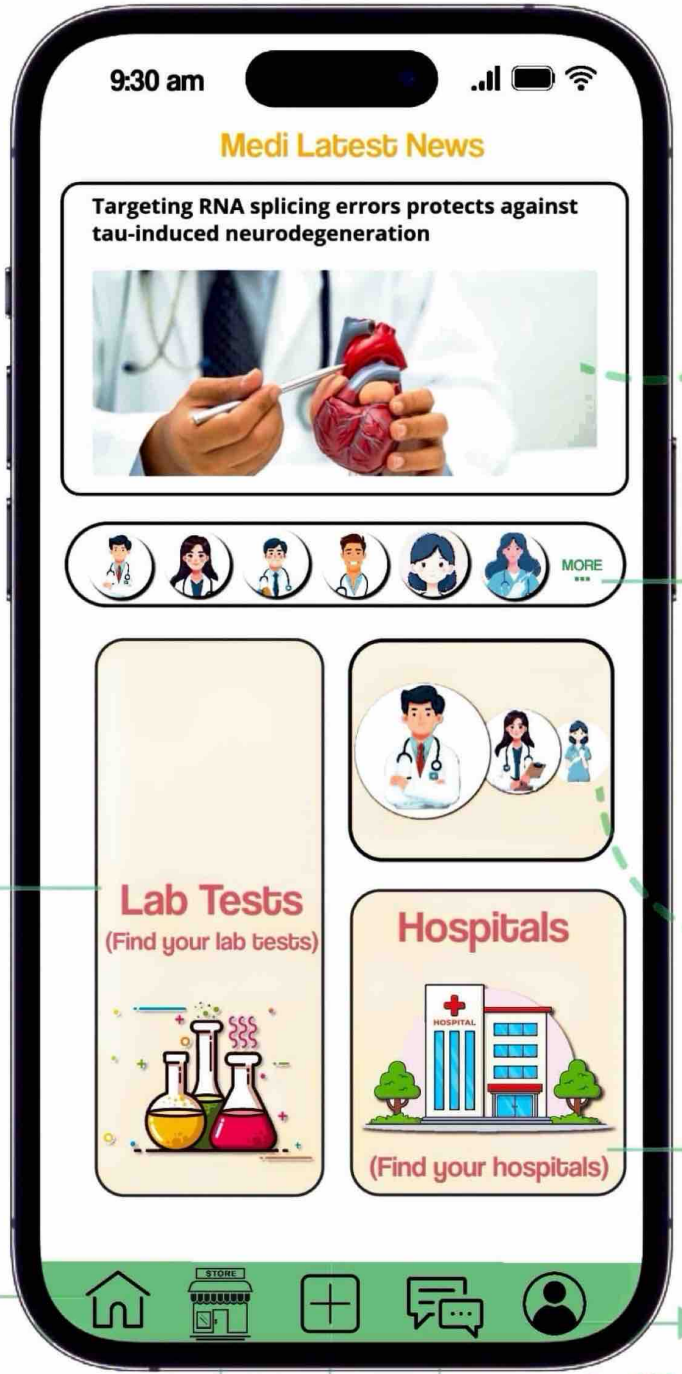

High margins

Extremely high trust

People get results faster

Perfect connection to doctor consultations

MediApp – Marketing Plans

#1 Goal & KPIs

Goal (first 12 months): Acquire trusted local usage – 50k installs in Arunachal + 10k paid teleconsults and 2 pilot franchise clinics opened.
Primary KPIs (first 6 months):
App installs (Arunachal) – target 25k
Weekly active users (WAU) – 20% of installs
Teleconsult bookings – 6,000 (month 6 monthly rate)
Medicine deliveries per month – 3,000
Cost per install (CPI) target – ₹30–₹80 depending channel
CAC (customer acquisition cost) target – ₹400–₹800 per paying patient initially
LTV : CAC target > 3x within 12–18 months

#2 Money on marketing

We will be wasting little to no money in advertisement and we will be doing free marketing, that is by

1) By building such a good project or service that people will themselves suggest each other's and their family members to use this service :

just like how people suggest each other to download Instagram to send reels or to download PUBG to play games. So our first goal of marketing is to make such a good product that people will not forget and tell other people to download it and it's a free marketing for us. Our whole business module if worked well will be a free marketing for us, Donations, Doctor's locations, services, a) financial freedom for doctors, b) free publicity for hospitals, c) cheaper consultation fees (because of it being online and free publicity) that people might actually change their payment options by choosing online appointment booking every-time instead of offline booking. Doctors, hospitals and people will themselves be marketing for us. d) Donations will boost people's emotions and make emotional connections towards us. Nothing can be a better marketing strategy than the customers and the employees themselves

2) Founder-led trust building :

In the early phase, I — the founder — will personally deliver medicines, interact with people, hear their stories, learn their problems, and show the public that MediApp is not built by some random corporate giant... it is built by one of them, for them.
A founder delivering medicine is not "cute".
It's powerful.

It shows:
transparency
humility
connection
intention
And every person that sees this becomes an ambassador automatically.
This becomes content, Instagram posts, stories, local news — free publicity that no marketing budget can buy.

3. The first hospital becomes the home of the founder :

The first hospital will itself be the office of the founder and the founder will live in the hospital, showing hard-work, connection and support for the people, customers will be so deeply connected with the founder.

Again, there are no better marketing agents than the customers themselves. People should see me working day and night, inside the system we built.
That builds something far beyond trust: emotional attachment.

When customers feel emotionally connected to a founder, the brand becomes cultural, not just commercial.

This is the kind of “marketing” money can’t buy.

Our customers are our marketing team

Doctors will promote us because we give them:

- visibility
- patients
- flexibile earning
- free publicity

Hospitals will promote us because we:

- send them patients
- reduce their marketing cost
- become their digital infrastructure

Patients will promote us because:

- we solve their problems
- we save tlheir lives
- we save their time
- we save their money

No influencer, no billboard, no campaign can beat real people saying real things.

#3 Total Cost : The Financials Reality

MediApp is not expensive:

So we will build in phases.

A) Fixed Costs

These are upfront and one-time:

- **Google Play registration**
- **Apple Developer licence**
- **Legal registrations**
- **Basic compliance certificates**
- **Doctor onboarding documents**
- **Pharmacy onboarding documents**

These are small. A few thousand to a few lakhs in total

B) Variable Costs

These are the scalable ones:

1. App Development Cost

This depends on:

- app complexity
- UI/UX
- backend systems
- server load

Even a high-end app in India doesn't cross ₹20–40 lakhs total development cost initially.

We start lean.

We add features as revenue grows.

2. Hospital + Machine Investment

This is the big part.

We are not building a full hospital from scratch.

We are adding machines that Arunachal does not have — machines that force people to leave the state.

This includes:

- MRI
- CT scan
- Dialysis
- Ultrasound
- X-ray
- Emergency care equipment

Some machines cost 10–70 lakhs each, some even more.

But this is also where the real money comes from.

Healthcare machines always make money.

Not today, not tomorrow. every single day for the next 20 years.

This is real estate + medical infrastructure + service business combined.

3. Operating Costs

- Salaries (doctors, nurses, helpers, tech team)
- Medicine stock
- Delivery logistics
- Electricity
- Maintenance
- Insurance

These scale with growth.

Market Valuation:

If MediApp launches properly in Arunachal alone, with:

- live doctor availability
- medicine API
- delivery network
- online consultation
- appointment system
- one hospital + franchise blueprint

The starting valuation can easily touch ₹20–30 crore, even without profit.

Once we expand into the North-East and open 2–3 hospital franchises, valuation jumps to ₹150–300 crore.

With Pan-India intention, this enters unicorn ($1B) potential — because healthcare + tech will be the strongest combination in India right now and the coming years.

Government Subsidies & Projects We Can Use

Here are the relevant schemes that we can use :

- Ayushman Bharat Digital Mission (ABDM) – government actively supports digital health infrastructure.
- Startup India Seed Fund – grants and funding for innovative health tech.
- NEIIPP Scheme for North-East Industrial Promotion – heavy tax subsidies and reimbursement benefits for businesses in NE states.
- NABARD healthcare grants for rural medical centres
- Health infrastructure schemes for private-public partnership
- Medical equipment financing loans with extremely low interest
- NE special category state benefits (tax exemptions, GST reimbursements, transport subsidies)

Our location (Arunachal) is actually in a massive advantage if we are talking financially.

5) Investors Involvement – Our Philosophy

We are not just building MediApp to beg for money.
We are not building it just for a quick IPO or a flashy valuation.
We are building it to:

- Serve the people
- We will be building generational wealth
- We will be building trust
- We will be buuldint connection
- To build a real infrastructure and a whole new ecosystem around medical health tech.
- And change how healthcare works in the whole world.

So:
We will be taking investors only if:

- They share our vision
- They are ready to contribute and commit to our business fully
- They want to change the world
- They want to build with us long-term
- They respect our mission

We will NOT give equity to people with shallow vision and quick profits.
Our target is hugely generational wealth not just quick profits and money. Vision is ultimate control over health care for generations.Investors will be treated with respect, transparency, involvement, and a voice in the company.

6) Company's Business Rules – The DNA of our MediApp

A) Our Operations

1. Add as much necessary items as possible
2. Cut as much necessary items as possible
3. Re-add only what is truly needed or subtracted out of mistake or what shouldn't be subtracted and add them again. Add, remove and add again.
4. We have to Automate everything aggressively
5. We gotta do everything cheap – if it's not cheap, we gotta innovate some nee stuffs. if its impossible to innovate new cheaper stuffs, then we will outsource the stuff but everything should be as cheap and fast as possible with best quality and effectiveness at the same time.

B) Our Company's Spirit

1. Everyone must think that we are more than just a startup and more like a moment towards humanity.
2. We will have a "wired in" system in our work office that we will not rest until a problem is solved and do better than our competitors and serve the best product to the people.
3. Every idea matters – even from a child, we must be willing to take every idea and criticism from everyone, even from a child to an old man. Everyone's idea matters, even the staffs, employees, investors and board members. Everyone's ideas and opinions matters.
4. If someone does better than us → copy them → make stuffs even better and improve
5. Our principle should be :

"Hard work pays off. Transparency matters. Serving humanity comes first." At all cost.

7) The Future Vision – The Bigger Picture

MediApp is the beginning.
Not the end.

We are building:

- **A medical-tech ecosystem**
- **A franchise network**
- **A delivery network**
- **A hospital network**
- **A digital health infrastructure**
- **A brand of trust**
- **A long-term legacy**

But beyond that...

We will expand into:

- **Artificial intelligence**
- **Robotics**
- **Space medicine**
- **Space exploration**
- **Emergency care delivery drones**
- **Medical research**
- **Global healthcare systems**
- **Massive humanitarian missions**

Our ultimate goal is not just a company.
We gotta make a civilisation project.
Future should remember us.

MediApp

Thank you
